

**Extracting the Full Value of
YOUR DENTAL SCRAP.**

Making It Easy to Refine Your Dental Scrap.

As the **ONLY dentist-owned refinery**, Noble Metal Refining understands the **needs of dentists**. We make it it easy and profitable to have your dental scrap refined and recycled. We're a full-service industrial refiner of precious and semi-precious metals including gold, silver, platinum and palladium commonly found in the scrap materials collected by dental practices. We're different, because we are your direct line to quality refining, eliminating the middle-man. This results in:

HIGHER VALUE

Receive top dollar for your materials, instead of being underpaid by a broker.

FASTER TURNAROUND

Our streamlined process provides quicker processing of your materials.

TOTAL ACCOUNTABILITY

We are the refiner, so you can visit our facility and see the entire process for yourself.

Providing customers with a more transparent and direct way to do business was the idea behind our company from the start. Located in Indianapolis, Indiana, Noble Metal Refining is guided by a full-service team with years of experience in the refining industry. Together, we ensure that every client can see our refining process in action, and trust the value they receive for their scrap metal materials.

VP Sales & Marketing

Cut Out the Broker and Increase Your Profit.

Most dental practices unknowingly sell their dental scrap to brokers who do NOT work directly for the metal refiner. This adds an extra, unnecessary layer of time and cost to the process. At Noble Metal Refining, we employ a knowledgeable sales team to work directly with you instead. This maximizes the payment you receive for your materials.

Responsible Recycling.

Dental scrap is valuable because it contains scarce precious metals, as well as other materials of value. These metals are difficult to mine, and the mining industry has historically been marked by serious labor abuses, safety issues, and environmental destruction.

Whether you opt for direct payment or a donation to a favorite dental organization,

you are making a difference by choosing to have your dental scrap material refined and recycled.

Recovered metals and alloys can be used in a wide array of products, from cell phones to electric vehicles, helping to reduce the global demand for newly mined metals.

Choose What Works Best for You.

We understand that what works for one customer may not work for another. That's why we offer a variety of ways to have your dental scrap collected and processed.

3 CONVENIENT OPTIONS

ON-SITE VALUATION WITH ON-THE-SPOT CASH PAYMENT

Your Noble Metal Refining sales representative will assess your dental scrap at your office and provide you with a valuation based on spot precious metal prices, with instant payment.

SECURE PICKUP WITH PAYMENT UPON VALUATION

We'll arrange a secure pickup or shipment of your dental scrap at your convenience, and will issue prompt payment within 1 to 3 days of receipt of your materials.

WITNESS THE REFINING OF YOUR DENTAL SCRAP IN PERSON

We invite you to bring your dental scrap into our facility and see exactly how we refine and analyze the precious metal content of your materials in less than one hour, with full payment while you're here.

No matter which of our 3 easy options you choose, we'll provide you with deodorized containers for collecting your dental scrap, and will ensure the safe, secure collection of this medical waste material.

If you would prefer to return dental extractions to your patients, we'll be happy to supply your office with mailers so they can send in their own dental materials and receive direct payment from us.

A Process You Can Trust.

To ensure that you realize the true value of your materials, Noble Metal Refining focuses on providing a streamlined and transparent refining and valuation process.

Our open-door policy means you can visit our facility anytime to see how we utilize state-of-the-art refining and laboratory equipment to track your dental scrap lot throughout the process, measure and verify the value of your metals, and provide you with a fair and accurate final assay (metal purity report). Here are some of the key ways we ensure the integrity of our process for you:

1

UNIQUE CUSTOMER NUMBER

assigned to each dental lot enables tracking of its progress through the refining process

2

VERIFICATION

of incoming weights through video monitoring provides assurance of correct measurements

3

IN-HOUSE SMELTING

of dental materials assures quality control

4

STATE-OF-THE-ART EQUIPMENT

provides refining efficiency and valuation accuracy

5

FINAL ASSAY

ensures maximum accountability

6

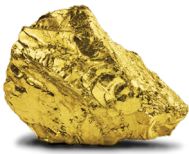

ECO-FRIENDLY PROCEDURES

go above and beyond Federal requirements

Well Worth Recovering.

The value of the precious metals in your dental scrap can be significant, and is determined for each dental lot through our state-of-the-art assay process. Here's a look at the materials we can recover from dental scrap such as crowns, bridges and porcelain fused metals (PFMs).

PRECIOUS METALS
